HERBELLA

Date: 1-2-2020

Guide:Ms.Nimmy Francis

1. Project Overview?

The main aim of this project is develop an online portal to shop Fruits, Vegetables and Herbs by providing the complete information of the product. Fruits and Herbs has an important role in our day to day life. Some Fruits, Vegetables and Herbs are very much essential for our health. They are packed with neccessary vitamins , proteins , carbohydrates etc.. and keep us free from diseases. This online fruits and herbs project focuses on creating a fit and healthy lifestyle.

2. To what extend the system is proposed for?

The proposed system is defined to meets all the disadvantages of the existing system. It is necessary to have a system that is more user friendly and user attractive for business growth; on such consideration the system is proposed. In our proposed system there is admin who can view all the products, suppliers and users. It allows customers to make their orders and do their transactions by using online payment method .Users of this proposed system are admin, customer and supplier. The aim of proposed system is to develop a system of improved facilities. The system provides proper security and reduces the manual work. Online shopping advancements have been so drastic that it has evolved to be a part of our life. Today customer doesn't drive down to some shop for buying a product but preferably check over the internet for price, offers, reviews and order online. The current system working procedure in those cities is where customer calls/drives down to shop to order the herbs, fruits and vegetables by providing the shopkeeper a deliverable address and then a delivery person delivers the order to customer's door step, as this system works totally offline and has lot of drawbacks. The major drawbacks in current offline system are repeated calls from and to customer, if multiple orders are placed from same locality the delivery person travels multiple times, there is no track of order, etc. The proposed system is used for herbs, fruits, vegetables ordering and delivery management system, where customer can make order online by searching the nearby shops which provide the service and make payment online

3. Specify the Viewers/Public which is to be involved in the System?

Customer, Supplier, Admin

- 4. List the Modules included in your System?
 - 1. Admin Module
 - 2. Customer Module
 - 3. Supplier
- 5. Identify the users in your project?

Customer, Supplier, Admin
